

Mobile System with GPS & Fall Detection

The Mobile System with GPS & Fall Detection is a leading-edge personal emergency response system that offers active seniors and at-risk individuals the freedom and peace-of-mind of receiving 24/7 medical monitoring services from virtually anywhere. More than just a panic button, it provides automated fall detection and device tracking with A-GPS/Wi-Fi location services.

How Our Systems With Fall Detection Work

In addition to their manual emergency buttons, our systems with fall detection automatically detect falls and contact help without the need to push a button.

A fall occurs with these systems, and no action is needed.

Your device contacts the 24/7 Galaxy Medical Alert Response Centre.

A Galaxy professional sends help if needed, and contacts your loved ones.

Note: These systems will not detect 100% of all falls. When you can you should press the button on the pendant to get help. The pendants have been designed and recommended by the manufacturer to be worn on the outside of clothing for proper fall detection use.

RETAIN YOUR INDEPENDENCE

Reduce the Risk of Hospitalization

Studies show that if you can get help within 1 hour following an emergency, there is a 90% chance that you will maintain your independence. Some call this the "Golden Hour".

Take the first step toward ensuring your independence.
